DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3, 14, 16, 27, and 29 are rejected under 35 U.S.C. 102(b) as being anticipated by Imaizumi et al. (US 6,327,453).

Imaizumi et al. disclose a color-image forming device including a color-image forming unit (K, Y, M, C) for forming a color image by superimposing a plurality of images corresponding to a plurality of colors onto a recording medium. Registration correction Unit (406) is an automatic color-drift correction unit for executing a correction of color drift generated during the superimposition of the images.

The registration correction process is executed at predetermined time intervals (col. 10, lines 12-16). This reads on a color-drift correction execution interval setting unit for variably setting color-drift correction execution intervals, at which color-drift correction execution intervals the automatic color-drift correction executes the color-drift correction.

Step S35 in figure 6 determines whether a predetermined time has elapsed since the previous registration correction, which reads on a color-drift correction execution time setting unit for setting a color-drift correction execution time.

Regarding claims 3 and 16, referring to figure 6, the registration correction can be performed during warm up, prior to entering preheat, when the paper is empty, after a

Art Unit: 2852

predetermined time, or after a number of image formations. These are all modes in which the automatic color-drift correction is capable of executing the color-drift correction.

Regarding claims 27-29, the automatic color-drift correction unit also reads on a method for controlling color-drift correction timing.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Allowable Subject Matter

Claims 7, 8, 20, 21, 33, and 34 are allowed.

Response to Arguments

Applicant's arguments filed 1 December 2005 (Response) have been fully considered but they are not persuasive.

Applicant interprets the correction execution time setting unit as setting the correction to be performed at times at which the color-image forming device is rarely used (for example, prior to the start of each workday). Response, p. 12. This limitation is not found in the claim. Claims 1, 14, and 27 merely require a color-drift correction execution time setting unit capable of setting a correction execution time. They are not limited to the time of day. It should also be noted that setting the correction time on a day of the week basis was recited in original claim 6, for example, and has now been canceled.

Art Unit: 2852

Applicant also submits there is no disclosure or suggestion in Imaizumi of setting a color-drift execution time, at which automatic color-drift correction starts the color-drift correction.

Response p. 12. This statement is merely conclusory. Applicant has not provided why the claims distinguish over Imaizumi.

Applicants arguments with regards to the Taniwaki reference have been considered but are most because the claims rejected over Taniwaki have been cancelled.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ryan Gleitz whose telephone number is (571) 272-2134. The examiner can normally be reached on Monday-Friday between 9:00AM and 6:00PM.

Art Unit: 2852

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Arthur Grimley can be reached on (571) 272-2136. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
